

AI-Powered Event Management Platform

A full-stack event management platform designed to simplify marathon organization and participation while reducing manual workload through AI-powered assistance. The system enables efficient coordination between event organizers and participants with a seamless, role-based user experience.

An integrated AI assistant, powered by OpenAI with prompt engineering, provides real-time, context-aware responses, helping users quickly access event information, recommendations, and support—significantly improving efficiency and reducing administrative effort.

Key Features

- **AI Assistant for Automation:** AI-powered chatbot reduces manual workload by handling user queries and providing instant, structured responses.
- **Event Management:** Organizers can create, update, and manage marathon events efficiently.
- **User Participation:** Users can explore events, apply for marathons, and manage or cancel applications.
- **User Dashboard:** Centralized dashboard to manage events, applications, and activity history.
- **Secure Authentication:** JWT-based authentication ensures secure access and protected routes.
- **Real-Time Interaction:** Chat-based AI assistant improves user engagement and experience.
- **Scalable Architecture:** Clean and modular full-stack structure for maintainability and scalability.

Technology Stack

Frontend: React.js, Tailwind CSS

Backend: Node.js, Express.js

Database: MongoDB

AI Integration: OpenAI API (Prompt Engineering)

Authentication: JWT

Deployment: Vercel (Backend), Netlify (Frontend)
